Verhindern der Überschreibung von config.js in jitsi-meet

Create a file called **custom-config.js** and place it at the root of your **web** configuration directory...

```
~/jitsi-meet-cfg/web/custom-config.js
```

Edit that file to set/override configuration values like so...

```
config.enableNoisyMicDetection = true;  
config.constraints.video.height = { ideal: 720, max: 720, min: 180 };  
// etc.
```

The [content of that file is appended 30](#) to the auto-generated **config.js**.
