

Linux

Wie cdrom von host an kvm client weiter leiten?

So after a variety of attempts from a number of forum posts, the following approach

[link1](#)

[link2](#)

worked for me:

```
>> ls SCSI
```

```
[2:0:0:0] cd/dvd HL-DT-ST BD-RE WH14NS40 1.03 /dev/sr0
```

And then hand modifying the ubuntu XML VM with

```
<controller type='scsi' index='0' model='virtio-scsi'/>
<hostdev mode='subsystem' type='scsi'>
  <source>
    <adapter name='scsi_host2' />
    <address type='scsi' bus='0' target='0' unit='0' />
  </source>
  <readonly />
  <address type='drive' controller='0' bus='0' target='0' unit='0' />
</hostdev>
```

Other posts had suggested changing the controller value to "1" which did not work for me.

I now have access to the Blu-ray drive from within the Ubuntu VM (it automatically detects a Audio disk insert and mounts it).

I am now able to rip audio CDs which was my original objective.
