

Linux

Large WAR file cannot be deployed in Tomcat 7

Problem

When uploading a WAR file larger than 50 MB, the Tomcat 7 Manager application reports:

The server encountered an internal error () that prevented it from fulfilling this request.

Exception java.lang.IllegalStateException:

org.apache.tomcat.util.http.fileupload.FileUploadBase\$SizeLimitExceededException:

the request was rejected because its size (XXX) exceeds the configured maximum (52428800)

Solution

- Go to the web.xml of the manager application (for instance it could be under /tomcat7/webapps/manager/WEB-INF/web.xml.
- Increase the max-file-size and max-request-size:

```
<multipart-config>
```

```
<!-- 50MB max -->
```

```
<max-file-size>52428800</max-file-size>
```

```
<max-request-size>52428800</max-request-size>
```

```
<file-size-threshold>0</file-size-threshold>
```

```
</multipart-config>
```
