After upgrade to NC12: Incorrect MySql/MariaDb database charset detected! #164

Quick update :

I updated NC to v12 today
I re-enabled news app and it was throwing errors about non-UTF8 characters in DB.

I searched a bit on the web and found this. news/issues/164

In order to fix the issue with News you have to.

- Disable and remove news app
- Remove news folder in /data
- Drop the news tables in your DB
- Add 'mysql.utf8mb4' => true, to your nextcloud config.php
- Install News app

And the error is gone and your feeds will be updated like before.
