

How to create a .patch file?

Möglichkeit 1)

```
diff -Pdpru Original-Path\ Geänderter-PATH\ > foobar.patch
```

Dann in spec:

```
Patch0: foobar.patch
```

und unter %prep nach %setup

```
%patch0 -p1 einfügen.
```

Möglichkeit 2):

- Make a copy of the file to patch
cp file file.orig

- Modify the file
vim/nano/... file

- Create the patch with diff
diff -u file.orig filetopach > file.patch

und dann auch in spec einfügen.

Möglichkeit 3):

Or just let the files be managed by a half-SCM GUILT:
